**DETAILED ACTION**

***Election/Restriction***

1. After further consideration, in view of Applicants' amendment filed May 5, 2005, the election to one of the following is deemed necessary for the best examination of the instant case.

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. *Claims 1-11* are drawn to a method for enabling access to remote client/server, classified in class *709/219*.
- II. *Claims 12-25* are drawn to a method for accessing peripheral devices, classified in class *710/36*.

3. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP 806.05(c)). In the instant case, the combination as claimed does not require the particular of the subcombination as claimed because the method for enabling access to resources connected to client nodes of a network can be facilitated without the specifics of selecting SCSI host adapters. The subcombination has separate utility such as using a SCSI host adapters to support various protocol I/O devices.

Art Unit: 2143

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
